

CyberEdge for Manufacturers

According to AIG, business's cyber claims are at an all-time high. In the UK's recent cyber-security survey some 48% of manufacturers reported having been subject to a cyber-attack.

Interestingly, unlike other industrial sectors where the critical cyber risk is to customer data only, for manufacturing companies cyber threats point directly at the heart of their ability to maintain operations. Due to a more automated and integrated system, incidents can have a devastating effect to production capabilities, supply lines and design processes. Ultimately, the recovery costs could substantially impact business revenue.

Howden is working with AIG to offer manufacturers a specialist insurance solution.

Cover includes all your computer systems running your production systems or running your factory technology.

Network interruption caused by any cyber attack on the system is covered as standard.

Optional network interruption cover for any accidental failure of the system – like a programming fault or human error while updating the system.

And all of this is underpinned by 24/7 first response, so even if you just suspect you might have a cyber problem you'll get emergency access to an IT and legal specialist for immediate critical support with no retention.

Optional network interruption cover in case your businesses is impacted by a cyber incident at any of your IT suppliers.

AIG's CyberEdge for manufacturers product is designed to help manufacturers maximise their business continuity in the face of one of the most volatile threats facing business today.

Howden is the official insurance partner to the UK. To find out more about how we can help you, please call or email us on:
